Shaping Drammen's city-landscape

Since October 2025, the elegant white bridge has spanned the Drammen River. It forms a central part of the city axis between the main square and the railway station. The 180-metre-long steel bridge is 19.4 metres wider than before, allowing users to cross it by bus, bicycle or on foot.

Work began with the removal of the existing bridge and the demolition of the foundations in the water. Work on the new river foundations and supports was then carried out on two floating platforms, each measuring 20 x 20 m. The steel parts were then assembled before the project was completed with a complete surface design. The parts for the steel bridge were transported by ship from PORR's new steel construction production facility across the sea to Norway – because transport by water is an effective and climate-friendly alternative to land transport.

Impressions

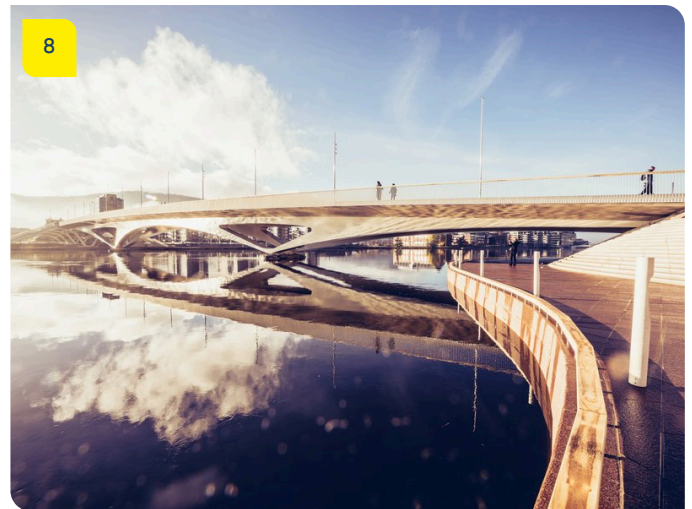

Image notes

1

A bridge to last for 100 years.

The bridge will be an essential part of everyday life of Drammen and its inhabitants in the years to come.

5

Work in progress.

Construction works started in 2022, the opening of the new City Bridge is scheduled for 2025.

7

Do you have questions about the project or would you like to learn more? Feel free to contact us for further information.

2

Computer model showing Drammen bybru at night.

As one of the main features of Drammen, the bridge is an important factor for the city of 100,000.

4

Demolition of old bridge in full swing!

Work to demolish the old bridge is underway to make way for the new one.
